8 squares	34.00	60.00	87.75	140.00	240.00
9 squares	38.25	67.50	98.75	157.50	270.00
10 squares	42.50	75.00	109.75	175.00	300.00

Advertisements must be paid quarterly in advance. Those inserted for months or less, must be accompanied with the money. Yearly advertisers are permitted to renew quarterly free of charge; further renewals charged one dollar per square. Advertisements from a distance must be accompanied with the cash in every instance.

The advertising of a house or firm will be strictly limited to its own immediate business.

Call on persons to become candidates, and political campaigns charged as advertisements, and will not be inserted without the cash in advance.

Editorial advertisements and personal communications will not be inserted unless paid for in advance at double the regular rates.

Announcement.

Announcing candidates for State or District office, ten dollars; county or town, always in advance. (Obituaries and tributes of respect over ten lines in length charged for at the regular advertising rates. Marriages, deaths and religious notices gratis.)

PULASKI, TENN.

FRIDAY MORNING, FEB. 15, 1867.

How I RAISE EARLY POTATOES.—A correspondent of the Germantown Telegraph, thus gives his method of raising early potatoes: "I thoroughly plow the ground as early as the spring will permit, put it in nice condition, and strike out the rows the same as for corn, three feet apart and shallow. Then drop the seed about fifteen inches apart and cover with a hoe; about one inch deep is sufficient to keep out frost and the heat on the surface soon sprouts the potatoes. I generally grow Buckeyes for early potatoes. There may be earlier varieties, but they are not so good. Last season I used them continually from the eighth of June, and that was before there were any potatoes in market except a few from Norfolk. I don't want any more mature about my potatoes; would sooner have none. This plan of raising potatoes is equally good for late ones, on still or wet lands."

To MAKE COWS GIVE MILK.—A writer who says his cow gives all the milk that is wanted in a family of eight persons, and from which was made two hundred and sixty pounds of butter during the year, gives the following as his mode of treatment—it is cheap, and worth at least a trial:

If you desire to get a large yield of rich milk, give your cows three times a day, water slightly warm, slightly salted, in which bran has been stirred at the rate of one quart to two gallons of water. You will find, if you have not tried this daily practice, that your cow will give twenty-five per cent. more milk immediately under the effect of it and she will become so attached to the diet as to refuse to drink clear water unless very thirsty, but this milk she will drink almost at any time and ask for more. The amount of this drink necessary is an ordinary water pail full each time, morning, noon and night. Your animal will then do her best at discounting the lacteal. Four hundred pounds of butter are often obtained from good stock, and instances are mentioned where the yield is even at a higher figure."

We get pay for publishing the following:

Our Baby.

I. Little laughing baby girl, How my heart begins to swirl, When your winning ways I see, As I'd hold you on my knee.

II. How your dimpled hands you clap, Springing almost from my lap, When I tell you baby makes, For dear papa a just cake.

III. Then those little cherry lips, Parting show the pretty tips, Of your little milk-white teeth, Peeping out from underneath.

IV. What a cunning well shaped nose, And them dainty little toes, Then your round blue eyes are bright, Like the stars that shine by night.

V. Sateen say you have white hair, So you leave no doubt to fear, 'Tis soft and fine you know, And your skin is white as snow.

VI. By-and-by you'll learn to walk, And then perhaps you'll also talk; Your first word must be "papa," Then you'll say my dear "mama."

VII. Oh, I hope when you are grown, And old enough to run alone, You'll be good and mindful too, Of all mine shall say to you.

VIII. Oh, may your little feet never stray, Far from your pleasant way, May you always be happy, You precious little baby boy, With your O. Blake to his baby at home, March 18th, 1868.

Liberal advertisers always get their money back with interest.

MISCELLANEOUS.

NASHVILLE, TENNESSEE.

No 43 College Street.

Green & Green,

LOUISVILLE, KENTUCKY.

Corner Fourth and Main Streets.

Hats, Caps and Cents' Furnishing Goods.

OUR HAT AND CAP STOCK

WILL comprise all that is new and desirable in imported and Eastern Goods, besides many styles of our own make and design.

OUR FURNISHING DEPARTMENT

Contains a large and complete assortment of everything that a gentleman needs, in shirts, underswear, Hosiery, Ties, Scarfs, Suspenders, Gloves & Collars.

A Large line of Goods for WEDDING OUTFITS.

The manufacture of our "Kentucky Yoke Shirts" forms a very prominent feature of our business. These are made from the finest material, and warranted to "do no harm."

DIRECTIONS FOR SELF-MEASUREMENT, and blank orders sent to those who cannot conveniently call, and goods sent by Express.

PLANTATION HATS AND SHIRTS.

In quantities to suit, and all qualities.

One Price Only.

All Goods Warranted as Represented.

ALABAMA, TENNESSEE

NORTH-WESTERN OIL AND MINING COMPANY.

Gen. JOHN C. BROWN, THOMAS M. JONES, JAMES McALLISTER.

Property of the Company.

THE property of the company consists of lands held interests in the counties of Morgan, Lawrence, Franklin, Lauderdale, Limestone, Madison and Jackson, Ala., and Franklin, Lincoln, Giles, Lawrence, Wayne, Perry, Humphreys, Lewis, Hickman, Menzies, Jackson, Cheatham and Williamson, Tenn., amounting to more than One Hundred Thousand Acres. The lands generally give the company nine-tenths of the oil, have from twenty to fifty years to run, and allow from three to five years for the commencement of the work. Upon many of them, no time for development is stipulated.

ad, making them, so far as mining purposes are concerned, nearly as good as if owned by the company in fee simple. Such an amount of territory it is also believed has never before been placed in any company of this character.

Indications of Oil.

The territory of the company has been leased by careful and competent agents, who have space and pains of expense to secure the best results in the various localities. Several very remarkable oil springs have been discovered, while gas, sulphur springs, salt licks and deposits of oil, asphaltum, or solidified petroleum, are of frequent occurrence. The shale, also, and much of the limestone with which these localities are surrounded, are of the best quality. West Virginia and Kentucky, are found in abundance, while valuable deposits of iron, coal, salt, clay, &c., are known to exist on the territory of the company.

A special correspondent of the Pittsburgh Oil News, writing for that journal recently, from Tennessee, says:

"The oil region of Tennessee embraces about 9,000 square miles, and the following counties or parts of counties: Robertson, Montgomery, Dickson, Hickman, Lewis, Lawrence, Wayne; the greater portions of Overton, Putnam, White, DeKalb, Warren, Coffee, Franklin, Perry, Humphreys, and Macon, considerable portions of Jackson, Cannon, Lincoln, Giles, Harlan, Williamson, Cheatham, Sumner, and small portions of Smith, Van Buren, Grundy, Maury and Davidson."

"The indications of oil in this division are very much superior to those in any other portion of the State. In Overton and other counties bordering the Tennessee river, in Kentucky, a considerable number of paying wells are already in operation. In Lawrence and Maury counties, Tennessee, there has been no development yet, but parties who have visited the different sections of the State are of opinion that these counties are unsurpassed in richness as oil territory. The limestone is often so impregnated with oil that a piece just broken off will burn brightly, and the shale has the odor of petroleum and will burn like coal. In some places, the oil is found in great quantities, and in some places, it is found in small quantities, but it is everywhere. In several places, the oil is gathered in such quantities twenty or thirty years ago, that it was used for fuel, and the springs, although not as numerous as oil springs, are nevertheless occasionally found, there being everywhere very rich deposits of oil."

"The explosions of petroleum gas in several counties in Tennessee have frequently been so powerful as to throw large rocks from their positions and destroy the people living in the vicinity. Sulphur springs are found everywhere around the slopes and in the valleys. As all the oil yet obtained in Tennessee is from the same source, it is not surprising that it has a strong sulphur smell, these springs are considered among the best of all the indications of oil. Salt licks, also, are found everywhere, and in some localities very considerable deposits of asphaltum, or solidified petroleum, have been discovered."

"Upon all the creeks that flow into the Tennessee river, from Chattanooga to Fort Henry, these oil indications exist in a greater or less degree. Upon Elk and Duck rivers, and their tributaries particularly, they are most marked. In some places, the sandstone, the sandstone, limestone and shale are found in alternate groups. In some places the sandstone in the beds of the streams, at times of low water in summer, can be found completely dry, and with oil for a distance of several rods. The limestone, also, is considerably impregnated with it, while the shale is of a black color, and the oil is found in the beds of the streams, at times of low water in summer, can be found completely dry, and with oil for a distance of several rods. The limestone, also, is considerably impregnated with it, while the shale is of a black color, and the oil is found in the beds of the streams, at times of low water in summer, can be found completely dry, and with oil for a distance of several rods. The limestone, also, is considerably impregnated with it, while the shale is of a black color, and the oil is found in the beds of the streams, at times of low water in summer, can be found completely dry, and with oil for a distance of several rods. The limestone, also, is considerably impregnated with it, while the shale is of a black color, and the oil is found in the beds of the streams, at times of low water in summer, can be found completely dry, and with oil for a distance of several rods. The limestone, also, is considerably impregnated with it, while the shale is of a black color, and the oil is found in the beds of the streams, at times of low water in summer, can be found completely dry, and with oil for a distance of several rods.
